

Technology Charter

For People Living with Dementia in Scotland

SCOTTISH
FIRE AND RESCUE SERVICE

Tunstall

Foreword

Technology in all its forms and applications is an integral part of life today.

Technologies such as smart phones, computers, tablets, apps and smart televisions are now commonplace in our lives – not just because they are available – but because people find them useful.

Technology can enable people with dementia to live longer at home or in a homely setting, stay independent for longer and give people greater choice about their care.

Technology has the potential to reduce the stress and distress of those living with dementia and enhance quality of life at all stages in the dementia journey.

Technology can offer huge benefits not just to people living with dementia but to all the partners in care who support them to live a safe and healthy life in the community of their choice.

This Charter has been written in partnership with people living with dementia to drive change and to raise public and professional awareness of how technology can make a difference to the lives of those living with dementia. We want everyone to know about the positive benefits of technology and how it can make a difference.

In this Charter, the term “technology” is used to describe the application and use of technological solutions (products, systems and processes) which can meet the changing needs of people wherever they are living with dementia in Scotland and support the delivery of integrated health and social care.

In this Charter, the term “partners in care” is used to define all stakeholders involved in supporting people living with dementia at an individual and/or a population level.

We want this Charter to empower people living with dementia to have confident and informed conversations as early as possible with partners in care. Conversations about what is possible. About how technology can complement the human care and support that is crucial to people living with dementia and how we can all work together to design and develop new technologies.

We hope that all our partners in care will sign up to this Charter and will use the Charter’s values and principles to drive the changes needed, to support work across a whole range of partnerships and ensure all staff are up-to-date and knowledgeable about the benefits of technology enabled dementia care.

If you wish to sign up to charter or receive further information please contact tec@alzscot.org

Published 30th November 2015

The Technology Charter for People Living with Dementia in Scotland 2015 follows on from the Charter of Rights for People with Dementia and their Carers in Scotland (Cross Party Group in the Scottish Parliament 2009) and aims to support achievement of the National Health and Wellbeing Outcomes and the 20/20 Vision for Scotland.

The Technology Charter for People Living with Dementia in Scotland 2015 is written to drive change and support the implementation of:

- Scotland's National Dementia Strategies (2010, 2013, 2016 and onwards).
- Standards of Care for People with Dementia in Scotland (2011).
- Promoting Excellence (2011).
- Existing Models of Dementia Care and Support (Post Diagnostic Support, 5 Pillars Model and 8 Pillars Model).
- Emerging, and future, nationally agreed Models of Dementia Care and Support.
- National and local housing policies and strategies.
- National Technology Enabled Care Programme workstreams.

Aim of the Charter

This Charter is a call to action, for us all to work together to actively promote the use of technology in health and social care and to benefit the increasing number of people living with dementia in Scotland and their families.

To be a mandate founded on a common set of core values and principles so that people living with dementia in Scotland benefit from technology to help them live a healthy life safely, securely and confidently as full citizens in society.

This Charter also seeks to raise public and professional awareness of how technology can enhance lives, promote independent living and assist and complement care and support.

The development of this Charter was funded by the Technology Enabled Care Programme (Scotland) 2014 - 2016.

<http://news.scotland.gov.uk/News/Technology-enabled-care-11fe.aspx>

The Charter was developed in consultation with people living with dementia, Alzheimer Scotland and partners in care drawn from across health, social care and housing, the technology industry and other organisations and services in Scotland.

Values

- 1** Practice and service provision is rights based, personalised and free from discrimination.
- 2** Unpaid carers and families are recognised and valued as equal partners in care.
- 3** Information and advice about technology is available in clear everyday language and in a variety of formats.
- 4** Routes and access to technology are ethical, equitable, simple, understandable and user-friendly.
- 5** Consideration of technology is embedded at all key points in the integrated dementia care pathway.
- 6** Technology augments - but does not replace - human intervention.

Principles

People living with dementia have a right to:

- 1** Enjoy equity of service and service provision.
- 2** Participate in decisions that affect them.
- 3** Feel safe, take positive risks and enjoy freedom of choice.
- 4** Have their strengths and experience acknowledged and used to maintain and develop skills.
- 5** Attain and maintain maximum independence, health and wellbeing.
- 6** Enjoy access to recreational, leisure and cultural life in their community.
- 7** Have a strong clear voice.

Partners in care need to:

- 1** Have the health, safety and wellbeing of people living with dementia at the heart of what they do.
- 2** Share information and data with all other partners in care who support people to live well with dementia.
- 3** Value the knowledge and experience of those living with dementia.
- 4** Include people living with dementia in the design and development of technology enabled dementia care.
- 5** Support positive risk taking and agree and share risk and responsibility.
- 6** Ensure technology is considered and included in the design of internal and external living environments.
- 7** Be confident that everyone involved in delivering care and support is aware of, and up-to-date with, the positive benefits of technology.

Enabling & empowering

- 1 To support what people can, and want to, do for themselves.
- 2 To increase choice and opportunity.
- 3 To support what is important to the person with dementia and their families and carers.
- 4 To support the ordinary everyday activities of daily life.
- 5 To reduce isolation and disconnection from personal and social communities.
- 6 To maximise existing skills and abilities and support the development of new skills.
- 7 To assist with communication and reduce the impact of sensory loss.
- 8 To support memory, reasoning, judgement and decision making.
- 9 To maintain social networks and enhance personal connection through social and digital media.

Health & well-being

- 1 To maximise confidence, capacity and capability of the individual to self-manage their dementia and any other health conditions they may have.
- 2 To support physical and mental health and wellbeing through the use of technology enabled care.
- 3 To help create or maintain routine.
- 4 To support the search for information, advice, support and help.
- 5 To reduce the risks associated with falls and disorientation.
- 6 To support reminiscence and life story work.
- 7 To support medication regimes.

Safety & independence

- 1 To provide individualised solutions to concerns about safety, security and independence.
- 2 To reduce risk of fire and prevent accidents.
- 3 To support people with dementia to walk freely and safely both indoors and outdoors.
- 4 To encourage going out and about and reduce the risk of being lost or the risks associated with being lost.
- 5 To facilitate the person with dementia to communicate with a remote partner in care should clarity or reassurance be required.
- 6 To automatically alert a remote partner in care to the real time occurrence of a risk to the person or property.
